TACTICAL SHOES

LOKI ARMY GREEN

250044-007

These are 4-inch lightweight **TACTICAL SHOES – LOKI**, designed for Post-Mission wear and Tactical use.

Size Range: 40-47

Height: 4 inch

Feature: Durable, Anti-slip, Soft, Breathable

Upper: 1.6-1.8mm Action Leather + Anti-wicking Nylon Fabric

Lining: Breathable BK Air Mesh

Tongue: Breathable BK Air Mesh

Collar: Padded for extra comfort

Insole: Moisture-EVA 2-3mm

Side Zip: NO

Sewing: Dual Sewed stitching

Outsole: EVA MD

Construction Way: Glue Cem

Season: Mid-Season

**ULTRA
LIGHTWEIGHT
SERIES**

ALPINE CROWN MILITARY

TECHNOLOGIES

3M Thinsulate INSULATION 400g/m²

Type U Thinsulate™ Ultra for Footwear is identified by black and orange labels. Compared to other types, it contains an increased amount of olefin fibers, resulting in Ultra's high resistance to various stresses, making it nearly ideal for footwear applications.

In addition to the standard version, there is also the Ultra Extreme Performance (Type B), which is the same insulation but with a higher density of 400 g/m². The 400 g/m² variant of 3M™ Thinsulate™ insulation provides sufficient warmth for footwear use in temperatures as low as -25°C.

YKK

YKK Zipper - Small part — big difference

High-quality YKK zipper known for its durability and smooth operation. Manufactured with precision-engineered materials to ensure reliable performance under various conditions. The zipper features corrosion-resistant metal or strong molded plastic teeth, offering excellent resistance to wear and tear.

Ideal for use in outdoor, military, and technical apparel where dependable fastening is critical.

Key features:

- Smooth and easy glide
- High strength and durability
- Corrosion and abrasion resistant
- Available in multiple sizes and finishes

Sympatex®

Sympatex® is a trademark owned by Sympatex Technologies GmbH (Germany). Under this brand, a synthetic material (a climate membrane) is produced for use in footwear and apparel, providing unique consumer benefits: by allowing moisture to pass in only one direction, Sympatex prevents water ingress while ensuring vapor moisture is expelled to the outside.

Sympatex is a non-porous, hydrophilic, capillary-type membrane.

It consists of a copolymer compound combining water-repellent polyester and vapor-permeable polyester. The polyester component is responsible for transporting water vapor outward.

How the membrane works:

When the temperature and humidity inside the footwear increase beyond the external conditions, a vapor pressure difference occurs, driving water vapor from the high-pressure interior to the lower-pressure exterior. Sweat molecules freely move through the membrane's built-in hydrophilic zones to the outer surface of the footwear, where they evaporate without obstruction.

Since Sympatex membrane is poreless, its performance does not degrade over time. This poreless design also allows the membrane to "breathe" even when exposed to water containing salts or oils.

Cordura® 1000D

Cordura® 1000D is a premium-grade tactical nylon originally developed by DuPont (USA) and now produced by INVISTA™, a global leader in performance textiles. Specifically designed for extreme-duty applications, Cordura® 1000D features ultra-high-strength **nylon 6.6 fibers** woven into a dense 1000 denier structure. This delivers **exceptional abrasion resistance, tensile strength, and puncture protection** – making it ideal for military footwear facing the harshest operational environments. The fabric is enhanced with **WR (Water Repellent)** and PU (Polyurethane) coatings that repel water, mud, and oils while maintaining breathability. Unlike traditional leather, it remains lightweight, quick drying, and highly durable in both wet and dry climates.

Technically, Cordura® 1000D outperforms standard fabrics across all key metrics:

- **Abrasion resistance:** > 50,000 cycles (StollTester)
- **Tensile strength:** up to 3000 N
- **Tear resistance:** approx. 150 N
- **Melting point:** 210–245°C
- **Weight:** approx. 400 g/m²
- **Water resistance:** 100% when laminated
- **Construction:** typically 5-layer laminated structure

Thanks to its **cut resistance, UV stability**, and ability to withstand both **extreme cold and high heat**, Cordura® 1000D is a core material in Alpine Crown Military boots – delivering mission-ready performance with minimal wear over time. With a **proven track record in combat zones, mountain operations, and tactical missions**, this fabric remains the gold standard for advanced military-grade footwear.

ALPINE CROWN MILITARY

TECHNOLOGIES

HBR TECH membrane

«DUPONT»
Kevlar

HBR Tech Membrane

The HBR® Tech Membrane is an advanced waterproof and breathable liner developed by **Cosmo Textiles (USA)**.

Designed as a hidden inner bootie, it features a **microporous polyurethane structure** with billions of hydrophobic pores – small enough to block water droplets yet large enough to release vapor. It delivers **full-spectrum waterproofing** against rain and mud while enabling moisture vapor transfer, maintaining dry feet and optimal thermal regulation. The membrane is **seam-sealed and stretchable**, integrated directly into the boot lining for full-coverage weatherproofing without sacrificing comfort or mobility.

Technically, the HBR membrane withstands over **100,000 flex cycles** without leakage and achieves a **Moisture Vapor Transmission Rate (MVTR)** of approximately **37.8 mg/cm²/hr** (EN ISO 20345), ensuring high breathability even during intense movement. It resists blood-borne pathogens (ASTM F1671 compliant), adding an extra layer of biological hazard protection in critical environments. Lightweight, durable, and field-proven, HBR® technology equips Alpine Crown boots for multi-climate military operations, delivering elite-level comfort and protection in wet, cold, and high-activity scenarios.

king TEX MEMBRANE

KingTex Membrane

KingTex® is a proprietary waterproof and breathable membrane technology developed from Asia (developed by Zhejiang Kingtex in PRC) and used in Alpine Crown's tactical footwear. It acts as an internal climate shield: its semi-permeable PU structure forms a fully seam-taped, lightweight barrier that blocks water, mud, and rain while allowing sweat vapor to escape. Chemically stable and thermally adaptive, it maintains reliable protection and comfort in extreme field conditions - ensuring dry feet, zero bulk, and full mobility on any mission.

Performance-wise, KingTex membranes are engineered to deliver solid waterproof ratings and adequate breathability suited for combat and hiking use. Gear outfitted with KingTex often boasts hydrostatic head ratings on the order of 5,000 to 10,000 mm H₂O, and breathability up to 3,000 g/m²/24h .

Designed for durability, the membrane resists flexural fatigue, delamination, and in-boot abrasion over long-term deployment. Integrated into Alpine Crown boots through precision lamination and seam-sealing, KingTex delivers all-season environmental protection and operational reliability across wet, high-mobility, and multi-climate terrains.

Kevlar® (by DuPont)

Kevlar® is a world-renowned aramid fiber technology from DuPont (USA), famous for its role in ballistic armor and other high-impact protection systems. With a **tensile strength of ~3.6 GPa**, Kevlar is **5×stronger than steel by weight**, yet remains lightweight, flexible, and resistant to cuts, abrasion, heat (**up to 450 °C**), and corrosion. In Alpine Crown boots, Kevlar is applied as a **puncture-resistant midsole insert**, forming a thin, durable barrier between the footbed and outsole.

Tested to withstand forces over **1100 N**, the insert protects against nails, shrapnel, and sharp debris without compromising mobility or comfort. Unlike steel plates, Kevlar does not conduct heat or cold and does not stiffen the boot, ensuring all-terrain readiness. Its non-metallic, fatigue-resistant design offers lasting protection in wet, corrosive, or high-risk environments. Field-proven and combat-tested, Kevlar® gives soldiers lightweight underfoot armor trusted by militaries worldwide for mission-critical safety and performance.

ULTRA LIGHTWEIGHT SERIES

Ultra Lightweight Series

The **Ultra Lightweight Series** is Alpine Crown's precision-engineered solution for maximizing agility, endurance, and operational performance. Designed from the sole up to minimize weight, these boots feature **high-cushion EVA midsoles, para-aramid (Kevlar®/Twaron®) puncture-resistant inserts, and flexible TPR support frames** – all delivering strength without bulk. A **minimal-seam upper**, reinforced with **Cordura® panels and breathable mesh lining**, reduces unnecessary mass while maintaining durability and airflow. Every component, from the outsole to the insole, is selected for **high performance-to-weight ratio**, creating a boot that moves as fast and flexibly as the mission demands.

The results are mission-critical: Ultra Lightweight models reduce total boot mass by up to **40%** compared to conventional military footwear, with typical weight per boot under **600 grams**. This reduction improves **mobility, speed, and endurance, cutting energy expenditure by 7-10% per kg carried at the foot**. The shock-absorbing sole and anatomical footbed preserve joint health under load, while breathable construction ensures long-wear comfort in all climates. Whether sprinting, patrolling, or climbing, Alpine Crown's Ultra Lightweight Series gives operators the advantage of **less fatigue, faster response, and all-terrain readiness** - without compromising protection or support.
